► IOIT MUN '26

IOIT Model United Nations (IOIT MUN) is the flagship diplomatic simulation hosted by the AISSMS Institute of Information Technology (IOIT), Pune, under the banner of the IOIT ACM Student Chapter.

Launched in 2023 during IOIT's Silver Jubilee year, IOIT MUN was created with a vision to provide students a platform where debate meets diplomacy. It brings together young minds from across the country to deliberate on pressing global, national, and humanitarian issues, while fostering critical thinking, public speaking, research, and negotiation skills.

At IOIT MUN, participants step into the shoes of diplomats, policymakers, journalists, and leaders, engaging in committee sessions that mirror the United Nations and Indian political frameworks. From international security and human rights to development challenges and domestic politics, every agenda is designed to push delegates to think globally, act responsibly, and collaborate effectively.

Beyond being just a debate forum, IOIT MUN is an experience of leadership, cultural exchange, and friendship, preparing the youth to be compassionate and solution-oriented leaders of tomorrow.

Building on the overwhelming success of three consecutive editions of IOIT MUN, which drew widespread participation and fostered exceptional diplomatic engagement, we are proud to have also pioneered the inaugural edition of the IOIT Youth Parliament, providing a powerful platform for students to deliberate on critical national policy and legislative affairs. Carried by this momentum, we are delighted to host the 4th edition of IOIT MUN, promising to be our biggest, most impactful, and most sophisticated diplomatic simulation yet.

The Situation in the Strait of Hormuz: Addressing Maritime Security, Regional Stability, and Global Energy Supply

The Strait of Hormuz is one of the world's most vital maritime chokepoints, serving as a key route for global oil and liquefied natural gas (LNG) exports. As a result, any disruption in the Strait can have far-reaching consequences for global energy markets, international trade, and regional stability.

For decades, tensions involving Iran, Gulf states, the United States, and other international actors have threatened maritime security and freedom of navigation in the region.

Delegates are tasked with examining the underlying causes of instability in the Strait of Hormuz and proposing diplomatic, practical, and sustainable solutions that uphold international maritime security while respecting national sovereignty and promoting regional peace.

Incidents in the Strait continue to raise concerns over military escalation, economic disruption, and energy security.

ALL INDIA POLITICAL PARTIES MEET

Deliberation upon Simultaneous Elections and the Delimitation Exercise: Assessing their Constitutional, Federal, and Democratic Implications

India's electoral system is at a crossroads. Two major reforms, Simultaneous Elections (One Nation, One Election) and the Delimitation Exercise, have sparked widespread debate, with the potential to shape the future of the nation's democracy and federal structure for decades to come.

Supporters of simultaneous elections argue that holding Lok Sabha and State Assembly elections together could reduce costs, improve administrative efficiency, and enable governments to focus more consistently on governance rather than frequent election cycles.

However, these proposals also raise difficult questions. How can India balance efficiency with representative democracy? Will the reforms strengthen cooperative federalism, or alter the balance of power between the Union and the States?

Meanwhile, the Delimitation Exercise, expected after the next Census, seeks to redraw parliamentary and assembly constituencies to reflect changes in population and ensure fair representation across the country.

As Members of Parliament, delegates must navigate these constitutional, political, and democratic complexities to determine a path that preserves the spirit of the Constitution while meeting the needs of a rapidly evolving nation.

Confederation of Wizards**

The Gathering Storm: The International Wizarding Summit on the Rise of Voldemort

Set immediately following the Battle of the Department of Mysteries and the death of Sirius Black, this committee begins at the moment the wizarding world can no longer deny Lord Voldemort's return.

As fear spreads, Death Eater activity intensifies, and trust between magical nations begins to fracture, the International Confederation of Wizards (ICW) convenes an emergency International Wizarding Summit to coordinate a global response before the conflict descends into a full-scale wizarding war.

Representing Ministries of Magic, magical governments, schools, and influential organisations from across the world, delegates must deliberate upon intelligence sharing, international security, diplomatic cooperation, sanctions, refugee protection, and collective military action while balancing national interests and the International Statute of Wizarding Secrecy.

Every decision taken at this summit may determine whether the wizarding world stands united against the Dark Lord or falls divided before him.
"The war is no longer coming; it is already here."

Review of the E-Commerce Customs Duties Moratorium Post-MC14: Balancing Fiscal Sovereignty of Developing Nations with Global Digital Market Expansion

The rapid growth of the digital economy has transformed global trade, with products and services such as software, cloud computing, digital media, and artificial intelligence now being exchanged electronically across borders. Since 1998, WTO Members have maintained a moratorium preventing countries from imposing customs duties on these electronic transmissions to encourage digital trade and innovation.

As the digital economy continues to expand, many developing nations argue that the moratorium limits their ability to generate revenue and exercise fiscal sovereignty, while largely benefiting technologically advanced economies. Following the 14th WTO Ministerial Conference (MC14), the future of this policy remains uncertain.

Representing Ministries of Magic, magical governments, schools, and influential organisations from across the world, delegates must deliberate upon intelligence sharing, international security, diplomatic cooperation, sanctions, refugee protection, and collective military action while balancing national interests and the International Statute of Wizarding Secrecy

Delegates must evaluate whether the moratorium should be continued, reformed, or discontinued, while balancing the interests of global digital trade, innovation, economic development, and the fiscal needs of developing countries.

**United Nations Commission on
the Status of Women**

Addressing the Intersection of Healthcare Infrastructure and Restrictive Legal Frameworks on Women's Reproductive Autonomy

Women's reproductive autonomy remains a fundamental human rights issue, yet millions around the world continue to face barriers in accessing safe, affordable, and timely reproductive healthcare. In many countries, inadequate healthcare infrastructure, limited medical resources, and restrictive legal frameworks have significantly impacted access to services such as contraception, maternal healthcare, and safe abortion, raising concerns over gender equality, public health, and human rights.

The intersection of healthcare capacity and legal regulation presents complex challenges, with governments striving to balance public health priorities, cultural values, constitutional principles, and individual rights.

These disparities have resulted in unequal access to reproductive healthcare, particularly for marginalized and vulnerable populations.

Delegates are tasked with examining how healthcare infrastructure and legal frameworks influence women's reproductive autonomy and developing balanced, rights-based solutions that strengthen healthcare systems, promote equitable access to reproductive services, and respect the diverse legal and social contexts of Member States.
